

## Guide to Incorporate Food Insecurity Screening Into Clinic Workflow

Each clinic's workflow will be unique to their healthcare system's medical records, clinic practices, and team dynamics. Use this guide to determine what flow works best.

**Begin at the end to determine the best path forward.  
What resources are you able to assist your patients in accessing?**

**1** Identify the social screening tool that will screen work for your team and within your medical records.

Two examples are:

1. Hunger Vital Sign (see the following page)
2. PRAPARE

**2** Set screening parameters - what patient population and at what intervals?

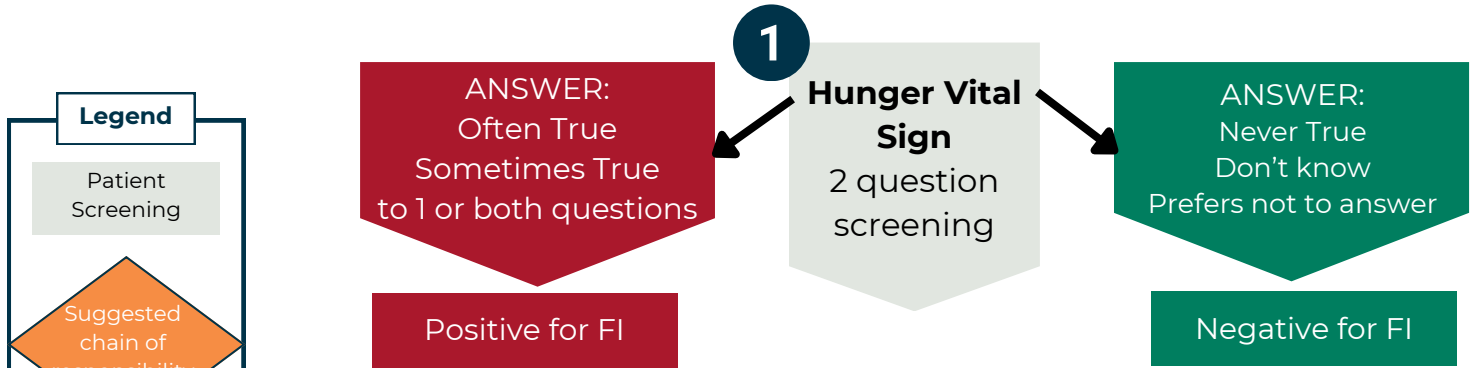

**3** Decide when and where screening will take place.

**4** Identify team member(s) that will review the screening responses.

**5** Outline the process to respond when a patient screens either positive or negative.

1. Coding
2. Team member responsible for sharing resources
3. Documentation
4. Follow-up procedure (if possible)
